

# TANMAY PACHRUTKAR

Data Scientist | Machine Learning | Analytics

• +91 7620059348 • [tanmay20pa@gmail.com](mailto:tanmay20pa@gmail.com) • Wardha, Maharashtra • [LinkedIn](#) • [GitHub](#) • [Portfolio](#)

## PROFESSIONAL SUMMARY

Data-driven Computer Engineer with expertise in machine learning, statistical analysis, and algorithm design. Proficient in Python (scikit-learn, TensorFlow, pandas, NumPy), SQL, and Java, with hands-on experience formulating data-driven approaches, building predictive models, conducting exploratory analysis, and iterating on solutions based on validation metrics. Seeking to leverage this analytical and engineering foundation to solve complex data science problems and drive measurable business impact.

## TECHNICAL SKILLS

**Programming Languages:** Python, Java, SQL, JavaScript, HTML, CSS

**Machine Learning & AI:** scikit-learn, TensorFlow, pandas, NumPy, Model Evaluation (cross-validation, confusion matrices)

**Data Science:** Statistics, Hypothesis Testing, EDA, Feature Engineering, RFM Segmentation, Churn Prediction, Algorithms

**Tools & Platforms:** Power BI, Excel (Advanced), Git, GitHub, MySQL, Oracle SQL, VS Code, Linux

**Soft Skills:** Problem-Solving, Analytical Thinking, Data Interpretation, Stakeholder Communication, Business Acumen

## WORK EXPERIENCE

### Data Analyst | LaunchEd Global (On-site)

Jan 2026 – Present

- Built machine learning models in Python (scikit-learn, pandas, NumPy) to predict customer churn and portfolio risk, improving model accuracy by 22% through feature engineering and hyperparameter tuning.
- Conducted statistical analysis and A/B testing on fintech transaction data using SQL and Python to validate hypotheses, directly informing product strategy decisions.
- Performed exploratory data analysis (EDA) to uncover patterns and anomalies in lending datasets, communicating findings through Power BI visualizations to cross-functional stakeholders.

### Data Analyst Intern | PREPCA (On-site)

Jan 2024 – Jun 2024

- Trained classification and regression models using scikit-learn and TensorFlow (Python, NumPy), evaluating performance via cross-validation and confusion matrices to select the highest-accuracy model for stakeholder review.
- Applied hypothesis testing and correlation analysis in Python/SQL on 50K+ data points to validate business assumptions, documenting confidence intervals and p-values for stakeholder review.
- Formulated data-driven problem statements and tested multiple algorithmic approaches, iterating on validation metrics to identify the best-performing solution for each use case.

## PROJECTS

### Customer Credit & Sales Behavior Analysis | [LINK](#)

Mar 2025

*Tech Stack: Python (pandas, NumPy), SQL, Power BI*

- Built an end-to-end analytics pipeline in Python and SQL to process large-scale retail sales datasets, using methodologies directly applicable to asset-backed lending customer data analysis.
- Formulated and implemented an RFM (Recency, Frequency, Monetary) segmentation algorithm to identify high-value customer cohorts and predict churn indicators, aligned with customer lifecycle analysis.
- Developed interactive Power BI dashboards with 10+ KPIs visualizing sales trends, churn signals, and revenue concentration by segment, enabling data-driven leadership decisions.
- Delivered data-backed recommendations projecting a 15–20% improvement in customer retention through predictive analysis.

### Sentiment Analysis Dashboard

Jul 2024

*Tech Stack: Python (NLP), MySQL, Power BI, Excel*

- Built an automated pipeline processing 50,000+ text entries using Python NLP libraries, applying data exploration techniques to surface trends and opportunities.
- Designed interactive Power BI dashboards visualizing sentiment trends and key performance metrics, reducing reporting turnaround by 40%.
- Interpreted results and iterated on approach, communicating actionable insights to stakeholders for product improvement decisions.

### CCTV Surveillance Streaming & Management Platform

May 2025

*Tech Stack: Python, REST API, SQL, JavaScript*

- Built a scalable platform supporting 10+ simultaneous live feeds with real-time recording and analytics.
- Developed RESTful APIs for backend operations, reducing server response time by 30% through optimization.
- Integrated a SQL database with role-based access control, achieving 99.9% system uptime reliability.

## EDUCATION

### B.E. in Computer Engineering

Dec 2021 – Jul 2025

Sinhgad Institute of Technology, Lonavala, Maharashtra

## CERTIFICATIONS

- Data Science Certification – **Acmegrade**
- Java Full Stack Development – **QSpiders**
- Introduction to Career Skills in Data Analytics – **LinkedIn & Microsoft**

## POSITIONS OF RESPONSIBILITY

- Technical Event Organizer, College Tech Club (2022 – 2025)** — organized 5+ coding workshops and technical seminars engaging 200+ students; tracked attendance and feedback data to drive continuous improvement, increasing participation by 30% through data-informed outreach.
- Participant, ACM Student Chapter (2022 – 2025)** — competed in 3 hackathons, delivering analytical and technical solutions under time constraints with cross-functional teams.
